

What if you could offer patients a cell-based treatment that prevents aging before it starts?

Introducing s4S SOLUTION™ — the first Cell Prejuvenator™ designed for clinical use.

This next-generation treatment supports rejuvenation, visible skin improvement, and early regeneration — all powered by natural, cell-derived bioactivity.

Why Prejuvenation Now

Your younger patients aren't asking to look younger — they want to stay looking young.

Gen Z and Millennials are choosing preventative care, but until now, there was no professional-grade solution made just for them.

s4S SOLUTION™ fills that gap.

- Prevents aging before it starts
- Safe and effective for younger, sensitive skin
- Clean, bioactive, and aligned with today's clinical trends
- A new offering for a fast-growing segment

What Makes It Different

Not a skin booster. Not just exosomes. A new clinical category.

s4S SOLUTION™ is powered by patented FECS™ Technology, where fibroblast skin cells become “super cells” — dramatically enhancing their regenerative output.

These cells naturally secrete a concentrated blend of growth factors, peptides, and exosomes — far more potent than traditional methods.

- ✓ Super-performing fibroblast cells
- ✓ High-output, cell-derived actives
- ✓ No synthetics. No genetic modification.

How It Works

- 1** Ethically donated fibroblast skin cells are cultured using patented FECS™ Technology
- 2** Cells naturally become “super cells,” boosting their regenerative activity
- 3** They secrete a potent blend of growth factors, peptides, and exosomes
- 4** The secretion is freeze-dried into a stable powder for purity and long-term storage

The result: a clean, high-performance treatment for prejuvenation, skin repair, and visible improvement — with no additives or artificial ingredients.

Clinical Benefits

- ✓ Improves skin texture and tone
- ✓ Helps reduce fine lines and acne scars
- ✓ Brightens, hydrates, and supports skin health
- ✓ No downtime, no harsh actives, no fillers
- ✓ Safe for all skin types, including sensitive and younger skin

Easy to integrate with microneedling, RF, mesotherapy, or similar skin-rejuvenating treatments.

- ✦✦ Designed for professional use only
- ✦✦ Results build over time with continued use

Powered by Stem Cell Science

Developed by PLURY, in collaboration with S.Biomedics — a global leader in stem cell science with over 150 global patents

s4S SOLUTION™ is powered by proprietary FECS™ fibroblast technology — the result of decades of stem cell and regenerative medicine research.

Now available to clinics seeking to lead in the next generation of skin health and aesthetics.

🔬 For professional use only

🌱 Cell-derived. No additives.

🇰🇷 Made in Korea. Globally patented.
